DETAILED ACTION

Allowable Subject Matter

1. Claims 1-29 are allowed.
2. The following is an examiner's statement of reasons for allowance.

Syverson et al. clearly teaches the construction of a hybrid alternator with voltage regulator comprising:

a field current modulator, being a transistor, that repeatedly switches between an ON state and an OFF state to control a flow of field current to said power generator;

an impedance circuit, being an RC circuit that:

selectively and temporarily absorbs excitation current,

selectively and temporarily absorbs excitation current based on a generator line contactor command,

absorbs excitation current following load-removal to reduce output voltage overshoot of said power generator,

absorbs excitation current during power up of said power generator;

an impedance circuit by-pass, being a transistor, connected across said impedance circuit, said impedance circuit by-pass selectively providing a low-impedance path across said impedance circuit so that said impedance circuit does not absorb excitation current, and further comprising a controller that switches said impedance circuit by-pass between an ON state and an OFF state; and

a field current modulation switch driver that repeatedly switches said field current modulator between the ON state, in which excitation current from said generator is sent to ground, and the OFF state, in which excitation current from said generator is received.

The prior art of record, taken alone or in combination, fails to teach the construction of a generator control apparatus having a free-wheeling path, including a freewheeling diode receiving an output of an impedance circuit that, when said field current modulator is in the OFF state, feeds excitation current received from said generator back to said power generator as a field current component as described on independent claims 1, 12, and 19.

Dependent claims 2-11, 13-18, and 20-29 are considered allowable by their respective dependence on allowed independent claims 1, 12, and 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
